

TEST ME

THE NEW WAY TO LEARN

By Amit Klein

The problems

- For students –

It is very hard to find practice questions for most subjects (school or university) and good ones are even harder to find.

- For tutors –

There is no platform to get noticed and prove yourself to get students to become your students (clients).

The solutions

Creating one platform to solve both problems.

- For tutors – Can upload questions and help others with their questions, get rating and get notice as a good and professional tutor.
- For students – Get an unlimited and always updating database of questions, get help when you get stuck in a problem and find a proven good tutor if you need one.

How does it work

The platform consist of two main function

Upload questions and answers

Downloading and practicing
questions

Road to success

First stage – just do it

The first version of the app will consist of the following:

- The ability to download and take quizzes and questions.
- Question maker - for making and uploading question.
- Rating for other's questions.
- Score for students to get point when getting a question right.

Second stage – be social

In the second stage we will be adding:

- A web site to make you app cross platforms.
- Social forums for asking and answering questions.
- Roles like moderator and editor for people to help make the questions better or to remove questions if needed.
- Adding images and audio for the questions and answers.

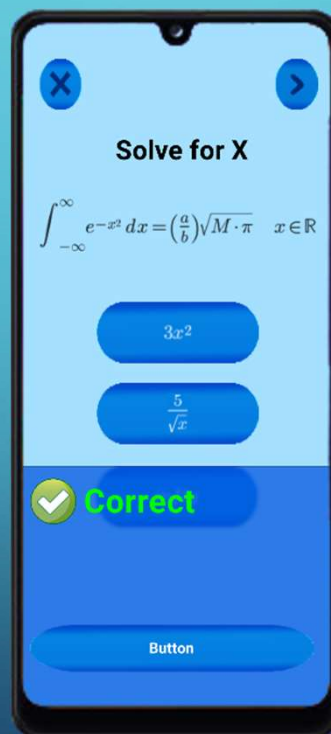

How is it going?

So why Test Me?

- After checking the market we found out that there are some apps and websites with the concept of 'cards quiz'.
- All the apps we found meant for personal use only (you can not share you questions for everyone to use and get other's questions).
- Everything on the market is text base and **Test Me** shows you more, for example, equations for math, physics and chemistry and we plan to make all options possible (images and audio).
- Non of the websites that let you share your questions rewards you for making them, that leads to very small questions database.
